

XM provides real weather real time when I need it. The traffic information is always available on XM, I don't have to wait for updates on my local station, when it is no good to me anymore. I think satellite radio is the future, I enjoy the flexibility that satellite radio offers consumers. I don't mind paying a few dollars a month for the convenience and timeliness that satellite radio offers. The NAB has no right to try and stop these services. Please stop the NAB.
